

KEEP YOUR BUSINESS ROLLING.™

Genuine BOWER Bearings

NTN acquired BOWER® brand from Federal Mogul Corp. in 1987. Included in the acquisition were the two plants in Hamilton, AL and Macomb, IL. NTN is the only company allowed to manufacture BOWER bearings. Always use NTN to ensure you have genuine BOWER bearings.

BCA Bearings

NTN acquired BCA® from Federal Mogul Corporation in 1996. For the next 10 years NTN licensed the BCA name to Federal Mogul Corp. Since 2006, NTN has been solely responsible for manufacturing and marketing BCA bearings. Always use NTN to guarantee you have the original BCA bearings.

Case Carburized for Shock Resistance and Long Life

A case carburized bearing has been put through a special heat treatment that strengthens the surfaces of the bearing while leaving the core pliable. This method increases the ability to handle shock loads, that can occur when a wheel hits a curb, and lengthens the life by 40% compared to through hardened bearings. You will only find this feature from a premium bearing supplier. All BOWER bearings are case carburized to assure long life.

NTN Plants

Our BOWER tapered roller bearings are currently being manufactured in two locations in the United States: Hamilton, AL and Macomb, IL. NTN also manufactures clutch pilot bearings in Schiller Park, IL.

Full Product Range

NTN manufactures a full line of ball and roller bearings for the Heavy Duty Aftermarket. Under the BOWER name we manufacture tapered and cylindrical roller bearings. Through BCA we manufacture radial ball bearings, max capacity ball bearings and agricultural bearings.

NTN serves a variety of industries including: Steel Production, Construction, Mining, Agriculture, Wind Energy, Electric Motor and Railway.
