

HEAVY DUTY MOUNTED UNITS

Superior Performance & Easy Installation

Designed and tested for demanding environments, NTN Heavy Duty Mounted Units offer superior performance in steel production equipment. NTN's interference lip contact seals in the outer ring offer excellent protection against contaminants and help retain lubrication. For added protection against corrosion, our insert bearings are phosphate coated, assuring maximum life and reliability.

NTN's Heavy Duty Mounted Units are easy to install and are factory sealed, lubricated and assembled. Our unitized insert bearings and through-bored housings also allow for easy replacement.
